

Norman Wells Joins Global Laminates and Ventec to Manage West Coast Sales and Distribution

Norman Wells, former sales engineer at both Rogers Corporation, 5 years, and Arlon, 9 years, has joined the joint venture between Ventec Laminates and Global Laminates to promote and support product sales in Southern CA. Ventec-Global Laminates Inc. (VGL) is a newly founded joint venture which will store, fabricate, and manufacture Ventec products out of their new Fullerton CA facility. The new pressing operation, designed to support the US quick turn market, is expected to be in full production by mid-September. Norman has extensive experience with advanced PCB substrates such as PTFE, and Polyimides and will introduce Ventec's DICY epoxy grades (VT-42 and VT-45) and phenolic lead free solderable grades (VT-48 and VT-47) into the West Coast in addition to the other, more specialized high performance laminates (VT-90 Polyimide, VT-44 Halogen free, VT-46 Low Loss) manufactured by Ventec.
