

Ventec Electronics and Global Laminates announce plans to open CCL press operation in Southern California.

Ventec Electronics, Suzhou China, and Global Laminates, Amesbury Ma, have announced plans to open a copper clad laminate press operation in Southern California. The new facility will offer quick turns of all the Ventec product line.

Chris Lung, President of Ventec Electronics and Jack Pattie, President of Global Laminates offered this joint statement. “The press operation is just another step to show our support for the North American and European PCB markets. Our first phase was to set up strong distribution channels for laminate and prepreg. Now that we have strong distribution in Boston, Chicago, Southern California, Northern California ,Toronto and the UK, the next phase is to support the market with quick turn capability”.

The joint fabrication and distributions operation are expected to be ready by the end of July .

Ventec manufactures dicy cured, phenolic cured, Polyimide and Halogen free laminate and preregs. More information can be found at www.ventecelectronics.com and www.globallaminates.com
